Saved population attributes and explicit residence sums need not reconcile. Missing residence values remain unknown.
Construction materials are one-time costs. Operating figures are nominal base values, not a prediction of actual treasury changes.
Voyage times and coverage remain assumptions unless explicitly marked as bounded observations.

Report scope

Rate units need in-game verification. Building counts are estimates.

Suggestions use last known local balances. They are not trade orders. Cached data stays unchanged until the game publishes new statistics.

This report shows the first 15 local gaps and 15 transfer suggestions, plus every received island.
